Part 2 of 2.

Together with my email just a moment ago (part 1 of 2), you should receive seven total photographs of the restored area.

If you have any further problems with these emailed photos, please let me know and I will make arrangements to get you hardcopies.

Thanks,
JB

Mr. Brunini, thanks for your email. Unfortunately, I am unable to view any of the photos. The file attachment indicates the size is only 320B (I presume it should be a lot larger). Our IT folks say the file is likely corrupt. Can you please try sending the file again? Thanks!

Ms. Kato,

In accordance with BIP 40, LLC's approved wetland restoration plan, attached please find "As-Built Plans" and several photographs of the restoration work recently completed on the referenced project. Review of the "As-Built Plans"

shows that BIP 40 successfully removed fill material and restored the subject wetland area and adjacent slopes to their original elevations. This restoration work and review of all survey data was completed on or just prior to November 10, 2013. We had hoped to provide you with this report and its attachments on or before November 15, 2013. The delay in providing this to you is entirely my fault and not that of BIP 40, as its work was complete before the scheduled completion date.

In its approved Restoration Plan, BIP 40 indicated that it would conduct seeding of the restored wetland area (but not the adjacent slopes) upon completion of the restoration activities. Unfortunately, by the time restoration work was completed, existing weather conditions prevented the proposed seeding in the restored area. Carlson McCain has advised that existing ground temperatures are at or below 20 degrees Fahrenheit, and ground temperature would need to be at or above 50 degrees Fahrenheit in order for germination to occur. Accordingly, BIP 40 will address seeding issues for this restored wetland area during the Spring of 2014 or as soon as weather conditions allow for successful germination. As for the slopes adjacent to the restored areas, BIP 40's approved Restoration Plan does not contemplate seeding these areas until Spring, 2014. As you can see from the attached photos, BIP 40 has installed the proposed straw waddles and silt fences to minimize impacts associated with erosion/sedimentation.

Once you have had an opportunity to review this information, please contact me with any questions you may have. Once again, thank you very much for all of the work that you and Ms. Heimdal provided in expediting the approval of our Restoration Plan and AOC in this matter. Also, because the attachments to this email are fairly large in size, please confirm your receipt of this email.

Thanks,
JB
